DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- When the user adds a new item to the shopping list, they shall also be asked to enter how many of that item to buy.
- The name of the new item shall be combined with how many of that item to buy into a new string before being added to the string containing all items on the shopping list.
- The combined string shall follow the following format:

  ```
  Milk       x        5
  ```

  The name of the item shall have a minimum width of 10 and be left aligned, and how many of that item to buy shall have a minimum width of 9 and be right aligned.
- The name and number of items shall be separated by an **x**.

NOTE: As the combined string is the one added to the shopping list string the same format will be used both when printing the currently added items and when printing the final shopping list.

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?
    a. The entry ticket.
    b. The supplementary task.
2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the entry ticket (excluding the supplementary task).
3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.
4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
