DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Add error handling to the `read_data` function. The function shall print an error message if there is a problem reading the specified file. The error message shall use the following format:

  ```
  *** ERROR: The specified file could not be read. ***
  ```

- Move the printing of the message `*** Data read from file ***` from the main function to the `read_data` function and only display it if the data could be read from the file (no errors occurred).

- Change the `print_test_subjects` function so that the following message is shown if no test subjects has been added yet.

  ```
  ---- Registered test subjects ----
  No test subjects found
  ```

NOTE: The `print_test_subjects` function shall keep working the same way it did before if the *test_subjects* parameter contains at least one element.

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?

    a. The entry ticket.

    b. The supplementary task.

2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).

3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.

4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
