DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Add a new menu option called **Statistics**. The user shall be able to pick the new option using the letter **T** when selecting a menu option.
- When the user selects the new menu option, he or she shall be prompted to enter a filename.
- The filename shall be used to read all the data about the test subjects from the specified file and calculate the average number of minutes it took a test subject to run around the lake.
- Display the average number of minutes it took a test subject to run around the lake using the following format:

  ```
  Average lap time: 12.5 minutes
  ```

  The average number of minutes shall be displayed using one decimal after the decimal point.

NOTE: The student can safely assume that there will always be at least one test subject in the file specified when the **Statistics** option is selected from the menu.

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?

    a. The entry ticket.

    b. The supplementary task.

2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).

3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.

4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
