DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Create a new empty list in the main function that will be used to store a history of all menu options selected by the user.
- Each time the user selects a menu option the letter representing that menu option shall be added to the newly created “history list”.
- Add a new menu option called **Show history**. The user shall be able to pick the new option using the letter **H** when selecting a menu option.
- When the user selects the new menu option, the complete history of all the menu options selected by the user shall be displayed on the screen using the following format:

```
History
-------
a
s
w
H
```

After a header and a divider has been printed, each element in the “history list” shall be printed on its own line.

Kristianstad University Sweden

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?
    a. The entry ticket.
    b. The supplementary task.
2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).
3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.
4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
