DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Create a new function called **read_int** that takes a string called *prompt* as its only parameter and that returns an integer value read from the user.
- The function shall use a loop and a try-except to keep asking the user to give an input until what is read from the user is an integer value.
- The *prompt* parameter shall be used as an argument to the input function when reading from the user in the loop.
- If a ValueError occurs (user enters something other than an integer), the following error message shall be shown before the loop iterates again.

  ```
  ERROR: Please enter an integer number.
  ```

- Update the **new_test_subject** function to use the newly created **read_int** function when it reads the time it took a test subject to run around the lake. Use the string `'Time   : '` as the argument when calling the function.

NOTE: There are three spaces before the colon and one space after the colon.

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?

    a. The entry ticket.

    b. The supplementary task.

2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).

3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.

4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
