DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Create a new function called **validate** that takes an integer called *number* as its only parameter and that returns a Boolean value (true/false).
- The function shall return true if *number* is larger or equal to one and if it is smaller or equal to 100, and if *number* is also an odd number, in all other cases the function shall return false.
- Add a new menu option called **Validate number**. The user shall be able to pick the new option using the letter **V** when selecting a menu option.
- Add functionality so that when selecting the new menu option, the user is first asked to enter the number associated with a test subject, then the entered number is validated using the **validate** function. Depending on what is returned from the **validate** function one of these messages shall be printed to the screen.

  Function returns **true**: `The number is valid.`
  Function returns **false**: `The number is NOT valid.`

NOTE: The student can safely assume that the user will enter an integer value when asked to do so after selecting the new menu option **Validate number**.

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?
    a. The entry ticket.
    b. The supplementary task.
2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).
3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.
4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
