DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Create a new function called **filter_range** that takes three parameters, a list of test subjects called *subjects*, and two integer values called *min* and *max*. The function shall return a list of strings.
- Each element in the *subjects* list shall be a tuple holding the number associated with a test subject (string) and the time (integer) it took the test subject to run around the lake.
- The list returned from the **filter_range** function shall contain the numbers of all those test subjects whose time falls between, or is equal to, the *min* and *max* sent as parameters to the function.
- Add a new menu option called **Test subjects in range**. The user shall be able to pick the new option using the letter **T** when selecting a menu option.
- When selecting the new menu option, the user shall first be asked to enter two integer values (min and max), next the new **filter_range** function shall be called using the current list of test subjects, and the read integer values as parameters. Finally, print the returned test subject numbers to the screen, one number per line.

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?
    a. The entry ticket.
    b. The supplementary task.
2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).
3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.
4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
