DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Create a new function called **get_times** that takes one parameter, a list of test subjects called *subjects*, and that returns a list of integer values.
- Each element in the *subjects* list shall be a tuple holding the number associated with a test subject (string) and the time (integer) it took the test subject to run around the lake.
- The list returned from the **get_times** function shall contain all the individual times registered for all the test subjects in the *subjects* list sent as a parameter to the function.
- Add a new menu option called **Print times only**. The user shall be able to pick the new option using the letter **P** when selecting a menu option.
- When selecting the new menu option, the new **get_times** function shall be called using the current list of test subjects as the argument. Each element from the returned list shall be printed to the screen, each element on its own line.

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?
    a. The entry ticket.
    b. The supplementary task.
2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).
3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.
4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
