DO NOT FORGET TO RECORD YOUR SCREEN

Use the entry ticket as the base and make the following changes:

- Create a new function called **check_file**. The function shall take a string called *filename* as its only parameter and shall return a Boolean value (true/false).
- The new function shall open the file specified by *filename* and use a loop together with a try-except catching ValueError to check that the file only stores integer values, and that only one value is stored on each line.
- The function shall return true if the file only stores integer values, otherwise the function shall return false.
- Add a new menu option called **Check file**. The user shall be able to pick the new option using the letter **C** when selecting a menu option.
- When the new menu option is selected the script shall ask the user to input a filename and then continue to call the function **check_file** using the specified filename as the argument. Depending on what the function returns one of the following two messages shall be printed to the screen.

  Function returns **true**: `*** File is: OK ***`
  Function returns **false**: `*** File is: NOK ***`

Kristianstad University Sweden

Group discussions

Students who pass the supplementary task will be divided into smaller random groups where the students shall *discuss* and *take notes* about the entry ticket, the supplementary task, and the design of the previously mentioned parts.

Students shall focus on the following topics:

1) What were the most important parts of the problem description for the following?
    a. The entry ticket.
    b. The supplementary task.
2) Create a detailed and accurate flowchart using the correct symbols that illustrates how to solve the main function from the entry ticket (excluding the supplementary task).
3) Have each group member briefly present his or her implementation, then discuss and compare the implementation details. Focus on both similarities and differences.
4) Discuss what parts of the examination that were the trickiest and why they were perceived this way. Select one tricky part and discuss how it was solved and what can be done to avoid similar problems in the future.
